

AWR-433W: Climate Literacy for Emergency Managers

Course Description

This awareness-level, asynchronous web-based training will provide participants with a general overview of climate change and how it relates to emergency management. The course will review the root causes of climate change and will address the impacts of climate change on communities. Additionally, risk communication messaging strategies around climate change will be shared.

The course is for emergency managers, along with stakeholders involved in emergency preparedness, climate, and equity. The course is designed to include SLTT emergency management and first responder communities to ensure attendees have access to key resources and planning tools on climate change and equity issues.

About this Course

This awareness level, asynchronous web-based training will provide participants with a general overview of climate change and how it relates to emergency management.

By the end of this course, participants will be able to fulfill the following learning objectives:

1. Describe the scientific phenomenon of climate change, including its root causes and current risk factors.
2. Describe risk communication methods such as storytelling to engage with community members.
3. Identify ways to assess credible science for supporting disaster management in vulnerable communities.
